SUMMARY

Full stack developer with about two years building web applications end to end, including 8+ months of production work at ForIT Software Factory. I design REST APIs with NestJS and Node.js, model relational data in PostgreSQL, and build typed front ends with Next.js and React, with end-to-end type safety via Zod. I write automated tests (Jest, Vitest, Supertest), containerize with Docker Compose and set up CI with GitHub Actions. Background in statistics and data analysis from university coursework. Native Spanish, C1 English (EF SET).

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, SQL, C#
- **Backend:** Node.js, NestJS, Express, REST API design, Prisma ORM, JWT / OAuth 2.0, Zod
- **Frontend:** Next.js 14 (App Router), React, Vite, NextAuth.js, Storybook
- **Databases:** PostgreSQL, MongoDB
- **Testing:** Jest, Vitest, Supertest, Testing Library, TDD
- **DevOps & Infra:** Docker, Docker Compose, GitHub Actions (CI/CD), Linux (Ubuntu), Nginx, Let's Encrypt, Render, Netlify
- **Practices:** Clean Architecture, Repository pattern, Scrum, code review

PROFESSIONAL EXPERIENCE

Full Stack Developer - ForIT Software Factory

Buenos Aires, Argentina | Feb 2026 - Present

Empower - youth mental health platform (Mar 2026 - Present)

- Develop a full stack platform with TypeScript, NestJS and Next.js 14 (App Router) on PostgreSQL and Prisma ORM.
- Built an editorial management system for learning materials (PDFs, videos, links) with distinct user roles and an approval workflow, translating stakeholder requirements into data models and API endpoints.
- Implemented role-based authentication with JWT and bcrypt on the backend and NextAuth.js on the frontend, with end-to-end type safety via Zod and nestjs-zod.
- Containerized backend and frontend with Docker Compose (one-command local setup) and wrote Jest unit tests for critical business logic.

Peer recognition platform (Feb - Mar 2026)

- Built a peer recognition platform with a real-time feed (TypeScript, Node.js, Next.js, PostgreSQL) in a pnpm Workspaces monorepo, in a Scrum team.
- Designed the backend with Clean Architecture and the Repository pattern, implementing 30+ decoupled use cases; integrated OAuth 2.0 (Discord) and JWT.
- Set up CI/CD with GitHub Actions and Vitest, blocking merges on failing tests.

PROJECTS

Library Management System | github.com/Juanmabott/biblioteca

TypeScript, Express, React, PostgreSQL, Docker

- Designed a Clean Architecture monorepo: framework-free domain layer, use cases built with TDD, REST and persistence adapters at the edges.
- Wrote 84 automated tests across domain (Vitest), API integration (Supertest) and UI components (Testing Library, Storybook); JWT auth with roles, orchestrated with Docker Compose.

DBD Roulette - P2P multiplayer web app | dbdjuan.netlify.app

React, Vite, WebRTC (PeerJS), Node.js

- Built a live multiplayer web app with a custom state-synchronization protocol over WebRTC and no game backend; Node.js scraper for the data set.

Self-hosted Linux server

Ubuntu, Docker, Nginx

- Run a home Ubuntu server with containerized services; handled domain migration, Nginx virtual hosts, Let's Encrypt SSL renewal and security hardening.

EDUCATION, CERTIFICATIONS & LANGUAGES

- **University Technical Degree in Programming** - Universidad Tecnologica Nacional (UTN), Avellaneda | Expected late 2026. Coursework: statistics and data analysis, systems analysis (UML), databases.
- **Oracle** Agentic AI Certified Foundations Associate
- **EF SET English Certificate** - C1 Advanced (cert.efset.org/es/Y8eUCJ)
- **Languages:** Spanish (native), English (C1). Remote from Argentina; available to cover Eastern and Mountain Time business hours.
